

Week 3- Day 2 Assignments

Integrate the Jira with this existing codebase

Activity: Integrate the AI Agent with Jira by adding a "Connect Jira" feature that allows users to establish a connection using their Jira Base URL, Email ID, and Jira API Token. Once the connection is successfully established, retrieve and populate the available Jira user stories within the application. Ensure the implementation follows the existing project architecture, UI design, and coding standards while maintaining compatibility with the current functionality.

The screenshot shows a web application running on a browser at `http://localhost:5174`. The browser's address bar and tabs are visible at the top. The application has a light green header with a button labeled "Connect Jira" highlighted by a red rectangle. Below the header, the main heading "User Story to Tests" is displayed in a large, bold, green font. Underneath the heading, a subtitle reads "Turn user stories into comprehensive, structured test cases in seconds." The interface is divided into two main sections. On the left, there is a form for entering user story details, including fields for "Story Title", "Description", and "Acceptance Criteria". On the right, there is a section titled "Generated Test Cases" which displays a table of test cases. The table has four columns: "TEST CASE ID", "TITLE", "CATEGORY", and "EXPECTED RESULT". Two test cases are listed: "TC-001" with a "Positive" category and "TC-002" with a "Negative" category. The bottom of the screenshot shows a Windows taskbar with various application icons and a system tray indicating the time as 12:13 PM on 7/23/2026.

AI-Powered Test Generation

User Story to Tests

Turn user stories into comprehensive, structured test cases in seconds.

Story Title *

User can login with valid credentials

Description

User should be able to log in with email and password

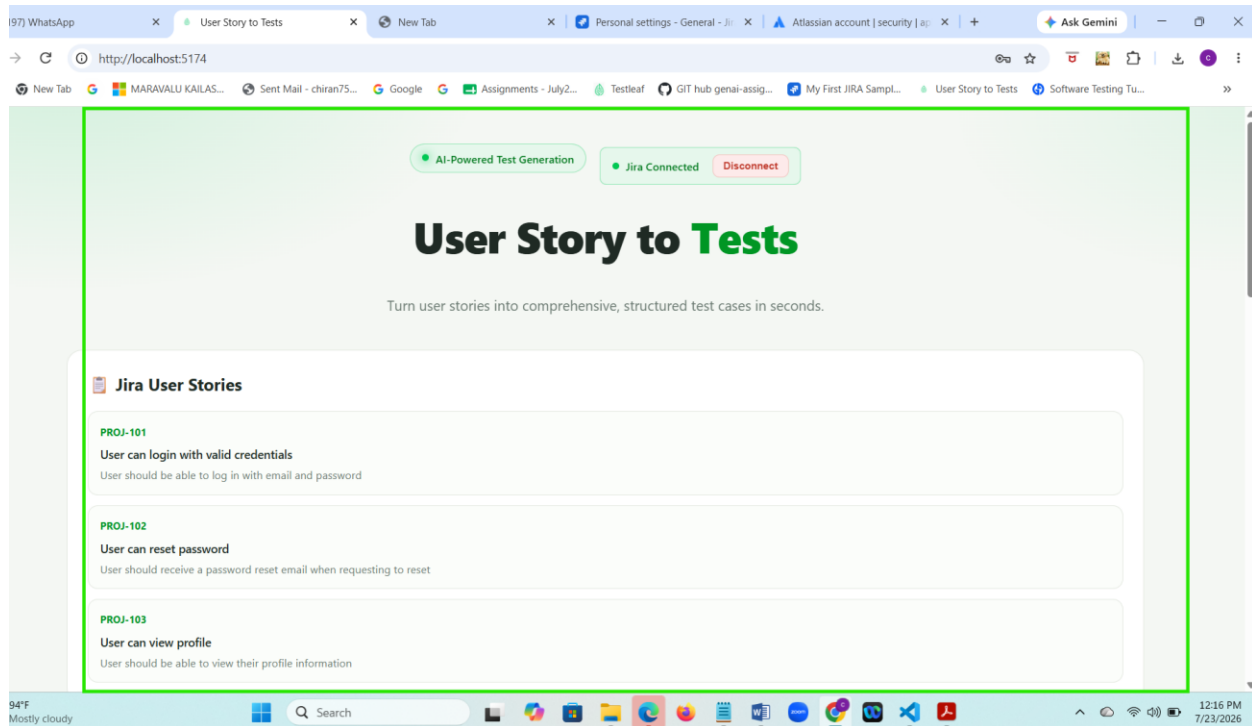

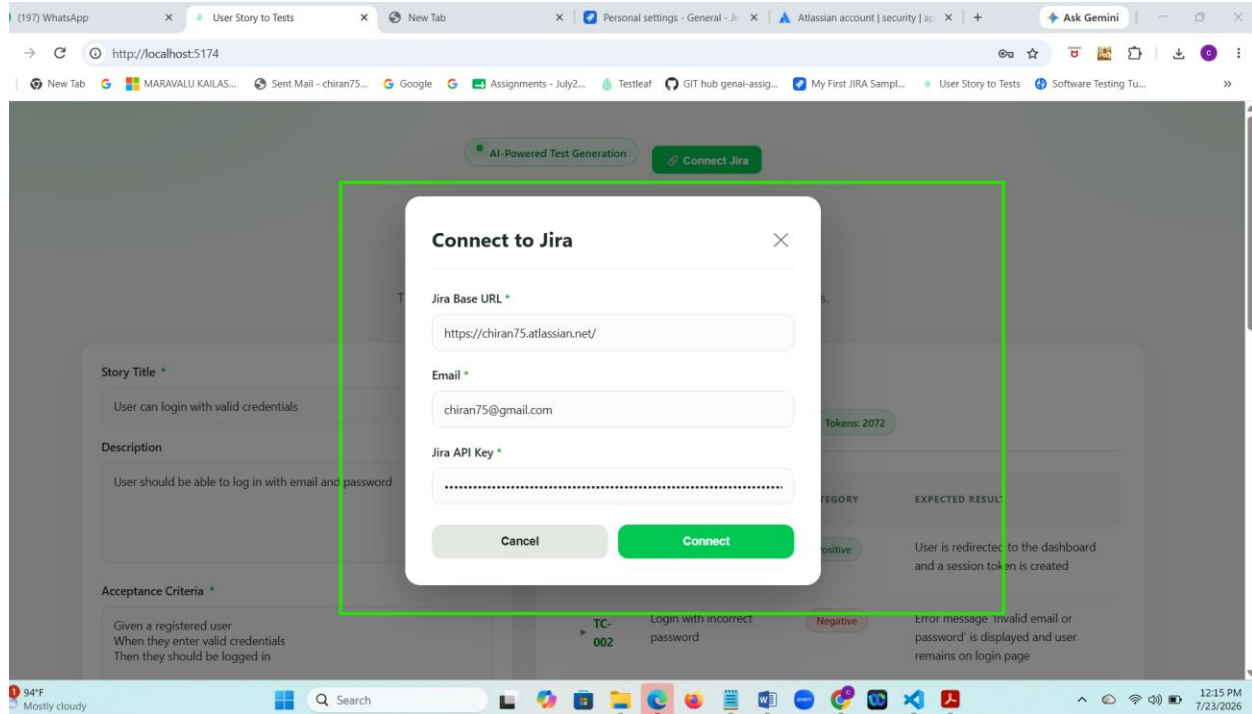

Acceptance Criteria *

Given a registered user
When they enter valid credentials
Then they should be logged in

Generated Test Cases

13 test case(s) Model: openai/gpt-oss-120b Tokens: 2072

TEST CASE ID	TITLE	CATEGORY	EXPECTED RESULT
TC-001	Login with valid email and password	Positive	User is redirected to the dashboard and a session token is created
TC-002	Login with incorrect password	Negative	Error message 'Invalid email or password' is displayed and user remains on login page

Story Title *

User can login with valid credentials

Description

User should be able to log in with email and password

Acceptance Criteria *

Given a registered user
When they enter valid credentials
Then they should be logged in

Summary

Story: PROJ-101

Reset

003

format

submission and shows 'Enter a valid email address' message

TC-004

Login with unregistered email

Negative

Error message 'Invalid email or password' is displayed

TC-005

Login with empty email and password fields

Negative

Validation messages 'Email is required' and 'Password is required' are displayed

TC-006

Login with leading/trailing spaces in email

Edge

System trims spaces and logs the user in successfully

TC-007

Login with maximum length password

Edge

User is logged in successfully

TC-008

Login with maximum length email address

Edge

User is logged in successfully

TC-009

Authorized access to protected resource after login

Authorization

Protected page loads and displays user-specific information

TC-010

Access protected resource without authentication

Authorization

User is redirected to the login page or receives a 401/403 response

94°F
Mostly cloudy
